SUMMER – 2019 EXAMINATION MODEL ANSWER

Subject: Object Oriented Programming Using C++ Subject Code: 22316

Important Instructions to examiners:

- 1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.
- 2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.
- 3) The language errors such as grammatical, spelling errors should not be given more Importance (Not applicable for subject English and Communication Skills).
- 4) While assessing figures, examiner may give credit for principal components indicated in the figure. The figures drawn by candidate and model answer may vary. The examiner may give credit for any equivalent figure drawn.
- 5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate's answers and model answer.
- 6) In case of some questions credit may be given by judgement on part of examiner of relevant answer based on candidate's understanding.
- 7) For programming language papers, credit may be given to any other program based on equivalent concept.

	Sub	Answer	Marking
Q.		Allswei	
No	Q.N.		Scheme
•			
1.		Attempt any <u>FIVE</u> of the following:	10
	a)	State the use of cin and cout.	2M
	Ans.	cin : cin is used to accept input data from user (Keyboard).	Use -
		cout:cout is used to display output data on screen.	1M each
	b)	Describe derived class with example.	2M
	Ans.	Derived class: In inheritance a new class is derived from an old class.	
		The new class is referred as derived class. The derived class can	Descript
		inherit all or some properties of its base class.	ion 1M
		Example:	
		class base	
		{	
		\ \right\};	Example
		class derived: public base	1M
		{	22/2
		\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\	
	c)	State use of scope resolution operator.	2M
	Ans.	It is used to uncover a hidden variable. Scope resolution operator	
	1 22254	allows access to the global version of a variable. The scope resolution	Use 2M

SUMMER – 2019 EXAMINATION MODEL ANSWER

	operator is used to refer variable of class anywhere in program.	
	:: Variable_name	
	OR	
	Scope resolution operator is also used in classes to identify the class	
	to which a member function belongs. Scope resolution variable is	
	used to define function outside of class.	
	Return_typeclass_name:: function_name()	
	()	
1)	D. (** 1 1 1	23.4
d)	Define class and object.	2M
Ans.	Class:	
	Class is a user defined data type that combines data and functions	
	together. It is a collection of objects of similar type.	Definitio
		n 1M
	Object:	each
	It is a basic run time entity that represents a person, place or any item	
	that the program has to handle.	
e)	Write the use of ios : : in and ios : : out.	2M
Ans.	ios::in - It is used as file opening mode to specify open file reading	2 1 V1
Alls.		Each
	only.	
	ios::out- It is used as file opening mode to specify open file writing	use 1M
	only.	
f)	Describe use of static data member.	2M
Ans.	Use of static data member:	
	Static data member (variable) is used to maintain values common to	Use 2M
	the entire class. Only one copy of static member is created for the	
	entire class and is shared by all the objects of that class. Its lifetime is	
	the entire program.	
g)	Give meaning of following statements:	2M
8/	int *ptr, a = 5;	
	ptr = & a;	
	-	
	cout << * ptr;	
A == · · ·	cout<< (* ptr) + 1;	
Ans.	int *ptr, a = 5;	
	-	
	initialize pointer variable with address of variable a (store address of	each
	variable a in ptr)	Stateme
	cout<< * ptr;	$nt^{1/2}M$
Alls.	Declare pointer variable ptr and variable a with initial value 5. ptr = & a; initialize pointer variable with address of variable a (store address of variable a in ptr)	Stateme

	getch(); }	
c)	Describe with examples, passing parameters to base class constructor and derived class constructor by creating object of	4M
Ans.	derived class. When a class is declared, a constructor can be declared inside the class to initialize data members. When a base class contains a constructor with one or more arguments then it is mandatory for the derived class to have a constructor and pass arguments to the base class constructor. When both the derived and base classes contain constructors, the base constructor is executed first and then the constructor in the derived class is executed. The constructor of derived class receives the entire list of values as its arguments and passes them on to the base constructors in the order in which they are declared in the derived class. General form to declare derived class constructor: Derived-constructor (arglist1, arglist (D)):Base1(arglist1) { Body of derived class constructor	Correct Descript ion 2M

(Autonomous)

(ISO/IEC - 27001 - 2005 Certified)

SUMMER – 2019 EXAMINATION MODEL ANSWER

Subject: Object Oriented Programming Using C++ Subject Code: 22316

Derived constructor declaration contains two parts separated with colon (:). First part provides declaration of arguments that are passed to the derived constructor and second part lists the function calls to the base constructors. **Example:** #include<iostream.h> #include<conio.h> class base int x; Correct public: example base(int a) 2Mx=a;cout<<"Constructor in base x="<<x; **}**; class derived: public base int y; public: derived(int a,int b):base(a) y=b;cout<<"Constructor in derived.y="<<y; **}**; void main() clrscr(); derived ob(2,3); getch(); In the above example, base class constructor requires one argument and derived class constructor requires one argument. Derived class constructor accepts two values and passes one value to base class constructor.

b)	Describe following terms: Inheritance, data abstraction, data	4M
D)	encapsulation, dynamic binding.	41V1
Ang	Inheritance:	
Ans.		
	1. Inheritance is the process by which objects of one class acquire	
	the properties of objects of another class.	
	2. It supports the concept of hierarchical classification. It also	Commont
	provides the idea of reusability.	Correct
	Data abstraction:	descripti
	1. Data abstraction refers to the act of representing essential features	on 1M
	without including the background details or explanations.	each
	2. Classes use the concept of abstraction and are defined as a list of	
	abstract attributes such as size, weight and cost and functions to	
	operate on these attributes.	
	Data encapsulation:	
	1. The wrapping up of data and functions together into a single unit	
	(called class) is known as encapsulation.	
	2. By this attribute the data is not accessible to the outside world,	
	and only those functions which are wrapped in the class can	
	access it.	
	Dynamic Binding:	
	1. Dynamic binding refers to the linking of a procedure call to be	
	executed in response to the call.	
	2. It is also known as late binding. It means that the code associated	
	with a given procedure call is not known until the time of the call	
	at run-time.

SUMMER – 2019 EXAMINATION MODEL ANSWER

b)	Write a program to swap two integers using call by reference method.	6M
	(Note: Any other relevant logic should be considered).	
Ans.	#include <iostream.h></iostream.h>	
	#include <conio.h></conio.h>	
	void swap(int*p, int*q)	
	{	
	int t;	
	t=*p;	
	*p=*q;	
	*q=t;	Correct
	}	logic
	void main()	<i>3M</i>
	{	
	int a,b;	Correct
	float x,y;	Syntax
	clrscr();	<i>3M</i>
	cout<<"Enter values of a and b\n";	
	cin>>a>>b;	
	cout<<"Before swapping\n";	
	cout<<"a="< <a<<"\tb="<<b<<endl;< th=""><th></th></a<<"\tb="<<b<<endl;<>	
	swap(&a, &b);	
	cout<<"After swapping\n";	
	cout<<"a="< <a<<"\tb="<<b<<endl;< th=""><th></th></a<<"\tb="<<b<<endl;<>	
	getch();	
		<i>(</i>) <i>(</i>
c)	Write a C++ program to implement following in heritance. Refer	6M
	Figure No.2:	
	Class : College Student student id	
	Data mem : College_code //	
	scribe following the inhersant and abstraction	
	Class : test Class : sports data mem : percentage data mem : grade	
	xar at assage trains and a mem . grade some	
	Class : Result	
	constraints of the following	
	Fig. No. 2	
	Accept and display data for one object of class result (Hint: use	
	virtual base class).

SUMMER – 2019 EXAMINATION MODEL ANSWER

```
cout <<"\n Enter sport grade\n";
cin>> grade;
void display_sportsData()
Cout << "\n sport grade: " << grade;
};
class result: public test, public sports
public:
void read_result()
read_collegeStud_Data();
read test()
read_sportsData();
void display_result()
display_collegeStud_Data();
display_test()
display_sportsData();
};
void main()
result r;
clrscr();
r.read_result();
r.display_result();
```
